COMPUTERVAULT

COMPUTERVAULTS
SOLUTION TO CITRIX
SHORTCOMINGS

2023

Introduction

In the virtual desktop and application delivery market, Citrix Virtual Apps and Desktops have long been a common choice. However, these solutions come with their fair share of challenges, including complex infrastructure setups, time-consuming deployments, and costly licensing. ComputerVault is a promising alternative that was designed to address these issues.

Simplified Infrastructure

ComputerVault offers a streamlined alternative to Citrix, designed to remove the complexities associated with multiple components and their interdependencies. It provides a unified solution for virtual transformation and application delivery by offering virtual desktops and servers on a Hyper-converged infrastructure with integrated software-defined networking and a built-in cybersecurity suite, all within a comprehensive software platform.

Installation and Support

The annual seat license covers all aspects of installation and deployment, along with continuous administration, support, patches, and upgrades for the ComputerVault software. This comprehensive package minimizes the necessity for organizations to make substantial investments in specialized Citrix training or rely on third-party Citrix specialists.

Rapid Deployment

Focused on rapid deployment of VDI and application delivery solutions, ComputerVault minimizes the time required for installation and configuration. By simplifying the process and automating certain tasks, customers can have an environment up and running more quickly, saving time and resources.

Lower TCO

By simplifying the infrastructure, offering intuitive licensing, and providing efficient deployment and troubleshooting tools, ComputerVault provides a lower TCO for customers compared to traditional Citrix environments. This reduction in costs makes the solution more attractive and financially feasible for organizations.

Cost-Effective Licensing

ComputerVault offers cost-effective, all-in-one annual seat licensing that covers a broader range of features, reducing the need for customers to purchase multiple licenses for various components. This approach can help lower the total cost of ownership (TCO).

Summary

ComputerVault offers a simplified, intuitive, and cost-effective alternative to Citrix Virtual Apps and Desktops. It streamlines infrastructure, provides user-friendly licensing, ensures rapid deployment, simplifies troubleshooting, and reduces the total cost of ownership (TCO). By addressing these challenges, ComputerVault aims to optimize the virtual desktop and application delivery experience for organizations, making it a compelling alternative to Citrix.
