

ApexaiQ® Case Study: Risk Reduction at Scale

ApexaiQ® is a SaaS based, agentless, and continuous asset assurance platform that delivers your IT-risk, obsolescence, maintenance, vulnerability impact, and compliance in a single dashboard measured with your ApexaiQ® risk score.

A European Multinational IT Service and Consulting Company

Headquartered in Bezons, France.
Offices Worldwide

of Assets: 1 Million+

Implementation Timeline: 4 weeks

Key Accelerators: SAP, Microsoft, ServiceNow, and Dell

Integrations: 30+ incl. CrowdStrike, Tenable, AWS, and Cycognito

INITIATIVE

Globally distributed InfoSec and asset management teams struggled to reduce their cyber risk, lacking an effective system to track and verify all their assets. With 75 different tool-sets across multiple environments and multiple teams managing different data points, the manual collection process was daunting, obtaining accurate and up-to-date information was difficult, and they had no way to deduplicate and categorize the assets.

Furthermore, reporting risk and demonstrating progress to leadership was a tedious and error-prone process involving weekly data exports from Excel with manual correlation.

Frustrated by an antiquated approach, they turned to ApexaiQ® to help streamline their process and provide true levels of asset risk with security and business context across their environments.

SOLUTION

- Prioritized data sources to reduce duplicates and create in-bound rules
- Implemented more than 1000 tags to provide security and business level context
- Identified top vulnerabilities and provided guidance to fix them
- Enhanced the data with collectors
- Integrated with ticketing system to reduce the turnaround time to fix the critical issues

RESULT

ApexaiQ® streamlined their approach, providing true levels of asset risk at full implementation with 60+ collectors. As a result, they discovered over 50% more data, leading to improved risk management, operational efficiency, and cost reduction. Additionally, they saved on cyber insurance and improved customer retention, delivering more value. With Apexa, they transformed data management, enhancing accuracy and visibility, meeting their goal to reduce overall risk at scale.

BENEFITS DELIVERED

Single view of CMDB

Identified All Shadow IT

Increase in Operational Efficiency

Reduction in IT issues and IT spending
